## MAPPED TO CODESONAR<sup>®</sup> 7.2 C/C++ WARNING CLASSES

## INTRODUCTION

The Common Weakness Enumeration (CWE™) is a list of software weakness types. Creating the list is a community initiative aimed at creating specific and succinct definitions for each common weakness type.

Every CodeSonar 7.2 warning report includes the numbers of any CWE weakness IDs that are closely mapped to the warning's class. (The close mapping for a warning class is the set of categories—including CWE weakness IDs—that most closely match the class, if any).

You can configure CodeSonar to enable and disable warning classes mapped to specific CWE weakness IDs, or use build presets to enable all warning classes that are closely mapped to any CWE weakness IDs. In addition, you can use the CodeSonar search function to find warnings related to specific CWE weakness IDs.

CodeSonar 7.2 is using CWE v4.9 (released October 13, 2022).

For more information on Common Weakness Enumeration:  
<https://cwe.mitre.org/data/index.html>

The remainder of this document comprises two tables:

- A table showing the close mapping between CodeSonar C and C++ warning classes and CWE weakness IDs.
- A table showing the broad mapping between CodeSonar C and C++ warning classes and CWE weakness IDs. The broad CWE mapping for a CodeSonar warning class combines CWE weakness IDs from four sources:
  1. The close CWE mapping for the class.
  2. Other CWE weakness IDs that are related to the class in a meaningful way, but not eligible for the close mapping.
  3. For all CWE weakness IDs from sources 1 and 2, all *ancestors* in the CWE hierarchy.
  4. For all CWE weakness IDs from sources 1 and 2, all *descendants* in the CWE hierarchy.

A separate document, [CWE Weakness IDs Mapped to CodeSonar® Java Warning Classes](#), lists the CodeSonar Java warning classes that are closely and broadly mapped to CWE weakness IDs.

**CWE CLOSE MAPPING: C/C++ (CODESONAR V7.2)**

The following table lists the CodeSonar C/C++ warning classes that are closely mapped to CWEweakness IDs.

Category ID	Category Name	CodeSonar Class Name
CWE:14	Compiler Removal of Code to Clear Buffers	Use of memset
CWE:15	External Control of System or Configuration Setting	Tainted Configuration Setting
CWE:20	Improper Input Validation	Coercion Alters Value Cast Alters Value Tainted Buffer Access
CWE:22	Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	Tainted Filename
CWE:73	External Control of File Name or Path	Tainted Filename
CWE:78	Improper Neutralization of Special Elements used in an OS Command ('OSCommand Injection')	Command Injection Untrusted Process Creation
CWE:88	Improper Neutralization of Argument Delimiters in a Command ('ArgumentInjection')	Command Injection
CWE:89	Improper Neutralization of Special Elements used in an SQL Command ('SQLInjection')	SQL Injection
CWE:90	Improper Neutralization of Special Elements used in an LDAP Query ('LDAPInjection')	LDAP Injection
CWE:99	Improper Control of Resource Identifiers ('Resource Injection')	Tainted Network Address Tainted Filename Untrusted Network Host Untrusted Network Port
CWE:114	Process Control	Command Injection Library Injection Untrusted Library Load
CWE:119	Improper Restriction of Operations within the Bounds of a Memory Buffer	Tainted Buffer Access Type Overrun Type Underrun High Risk Loop
